Supplementary Table 2. Linkages that cluster according to the pair-wise position of the two loci. The genome was split into 50 kb pair-wise bins and the number of significant linkages at FDR = 10% falling into each bin was recorded. For any bin containing more than three linkages, the exact marker positions and expression traits are listed below.

Group	Trait	Chr	Pos_start	Pos_end	Locus 1 Chr	Locus 1 Pos	Locus 2 Chr	Locus 2 Pos	Joint FDR	Cis	Putative Group Function
